Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Mr. Kasper presented actual physical models of the invention and color pictures of both the prior art and the applicant's invention. Mr. Kasper argued that Kupski teaches two cones and that the new language proposes to only recite "only one cone" on the spreading element. The examiner acknowledged that Kupski has two cones and that the examiner would require further analysis of the reference to see if only one cone would be sufficient to practice the invention. With respect to DSI, Mr. Kasper presented the limitation "a non-threaded bore" in claim 8 since DSI has the spreading element 10 has a thread bore. The examiner acknowledges the differences. The examiner indicated that he would have to review the rest of the prior art to find out whether any of the references teach a non-threaded bore. Mr. Kasper would present another amendment to the claims to fix the language directed to the "single and inner cone".
